DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

2. Claims 1-9, 11-13 & 15-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Dhont et al., [U.S. Patent No. 5,397,237]. Dhont (figures 1-6) teaches of a data protection device comprising: an enclosure (carrying case) having at least one wall (depicted in fig. 3) and a closable opening (depicted in fig. 5), the enclosure capable of protecting at least one data storage device (3) from a fire; at least one electrical connector (38 & 5 for example) and at least one data transmitter (37 & 4 for example) within the enclosure, for providing power to the inside of the enclosure and a data link between the inside and outside of the enclosure respectively. The data storage device being continuously connected to a power source and a data source via the cables (fig. 1). As to claims 11-13 & 15-20, Dhont teaches applicant's basic inventive claimed concept as structurally disclosed above, but does not specifically state a "method" of protecting a data storage device. However, the normal use or assembly of Dhont's structure would inherently encompass the steps as set forth as readily apparent to the examiner.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 10, 14 & 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dhont et al., in view of Applicant's Prior Art Admission [known hereafter as APAA] as disclosed on page 5, lines 20-23. Dhont teaches applicant's basic inventive claimed concept as disclosed above, but does not show the at least one data transmitter as utilizing infrared technology. However, on page 5, lines 20-23, applicant has disclosed that an "infrared communications link, such as one well known in the art" may be substituted for the data cord. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to replace a material [physical] link [a cord for example] with an invisible [non-physical] link [a radio wave for example] since it was known in the art [common knowledge] that infrared transmission between a source and remote destination eliminates the conventional hard wiring normally required.

Response to Amendment

5. The declaration filed on May 31, 2002 under 37 CFR 1.131 is sufficient to overcome the Engler reference.

Response to Arguments

6. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
